Let's Start!

Solving programming issues is no easy task.

Learning Outcome:

Understand key information about the concepts, principles, and methodologies in simple spoken and written situations. Read and write about programming techniques, use cases, kinds, and sequences in simple spoken and written situations.

Can Do Statements:

- I can read about programming issues.
- I can write a short paragraph about programming issues.
- I can explain some programming issues by giving additional information.

Ask your partner:

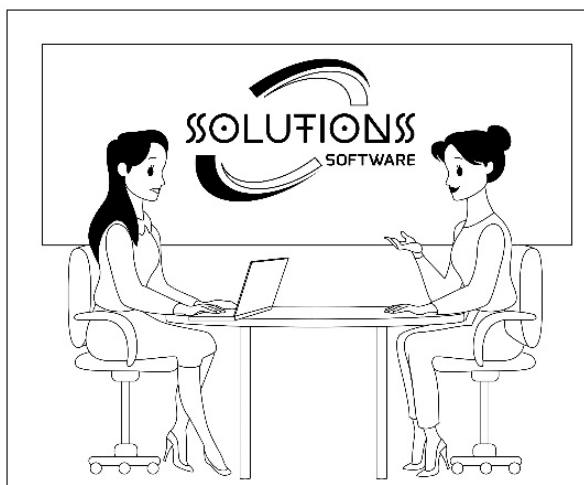

- What do you know about programming issues?
- Do you consider that programming issues are easy to solve? Why?

Let's Explore!

Every programming language is different.

Instructions: Read the text below.

Lisa: I always expect certain issues in programming.

Joanne: I know Lisa. The difficulty of programming, of course, depends on the programming language you use. For example, the issues in Java are different from C++ or the problems in JavaScript are different from Python. Actually, I am working on some programming issues that came up this morning and I want to solve them as soon as possible.

Lisa: I agree. Some issues take different measures. Sometimes, I get frustrated when errors show up in my programming; not anybody can solve some issues.

Joanne: It's part of everyone's job to solve the programming issues and errors. What do you do when you get a message error?

Lisa: First, I try to solve it alone. Then, I ask for references from programmers and coworkers or experts, but when I can solve an issue, I will remember the solution that I learn from the experts. The programmers are solving issues all the time, but the issues always appear. Once you solve an issue, it will be easier in the future, so it's about being patient. Are the programmers helping you solve those issues?

Joanne: Right now, no. They are working on something different, but I have to finish this before lunch. The computer needs to execute the program so we can continue with other issues.

Lisa: Would you like to share any additional information about programming issues?

Joanne: You should learn new skills and programming techniques all the time and learn from everybody; investigate about new tools and new programming languages. They are changing every day, so it is important to keep updated on everything you can.

Let's Practice!

Every programmer must know this information.

Instructions: Use the words from the box to correctly complete the sentences. Read the sentences aloud. Check your pronunciation with your instructor.

Word Bank

In other circumstances / In others / In some languages /
Any reference / Every / All

1. ____ to an array must be within its limits or bounds.
2. _____ ,out of bounds reference value might give you a message error.
3. _____, they can retrieve what is in the location memory.
4. _____ programming language might have its own issues.
5. _____ programmers can work with different programming languages.

Let's Practice!

Every program has its own issues.

Instructions: Organize the mystery sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. own / engineers / are / they / studying / the / and / come / arrays / with / their /
types / The / of / issues.

2. the / involves / The / allocation / are / programmers / arrays. / on / an / issue that /
of / the / working

3. programmer / The / is / the / solving / comes / issue / up / with / arrays. / usually /
that

Extension Activity

Programming issues now and then

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Investigate common programming issues from 10 years ago.
- Write the differences between the issues from the past and the current ones.
- Share your findings with your teacher and classmates.

Self-Assessment

Yes No

- I research about programming issues.
- I write and describe programming issues.
- I talk about programming issues with my teacher and classmates.

☐	☐
☐	☐

Target Words

- CEO** (abbreviation): chief executive officer, manager
e.g. Mr. Saenz, the CEO, talked about Software Quality Assurance, or SQA.
- bug** (noun): error or mistake, especially in software
e.g. I thought SQA wasn't that important, but now I see its relevance in bug detection.
- preliminary** (adjective): before the final part or version, preparatory
e.g. However, a more extensive and systematic testing is always performed when a preliminary version of the program is finished.
- to get a clear picture of** (expression): to understand a topic clearly
e.g. Did you get a clear picture of what SQA is?
- monitor** (verb): to control or supervise
e.g. SQA is the process that monitors software creation in order to avoid errors or bugs in the final product.
- ultimate** (adjective): maximum, last
e.g. One of the ultimate goals of SQA experts is developing artificially intelligent automatic testing software.

Learning Points

Simple Present tense and Present Continuous review

You can use the **Simple Present** to express the idea that an action is repeated or usual. The action can be a habit, a hobby, a daily event, a scheduled event or something that often happens.

You use the **Present Continuous** to express a current action or to indicate a possible action in the near future.

Simple Present structure:

Noun + present tense verb + complement

Examples:

I program Java at the office.

Steph **uses** C++ language.

Present continuous:

Verb to be + verb ING form + complement

I **am working** on the programming issues this weekend.

Pablo **is coding** the new software program.

Examples

- *I am working on some programming issues.*
- *I want to solve them as soon as possible.*
- *I try to solve it alone.*

Learning Points

Indefinite Pronouns

We use **indefinite pronouns** to refer to people or things without saying exactly who or what they are. We use pronouns ending in **-body** or **-one** for people, and pronouns ending in **-thing** for things:

Next is a chart with examples of indefinite pronouns:

Noun	Indefinite pronoun
I would like to go to Paris this summer.	I would like to go somewhere this summer.
Jim gave me this book.	Someone gave me this book.
I won't tell your secret to Sam .	I won't tell your secret to anyone .
I bought my school supplies at the mall.	I bought everything at the mall.

Examples

- *It's part of everyone's job.*
- *They are working on something different.*
- *Not anybody can solve some issues.*
